■SECTION 01

Application Overview

What is WishMe?

WishMe (**wishme.today**) is a **celebrity engagement platform** that enables fans to book personalized AI-generated video messages, greeting cards, voice calls, and wishes from their favorite celebrities. The platform leverages cutting-edge AI services — including HeyGen for video avatars, Sync.so for lip-syncing, ElevenLabs for voice cloning, and Google Gemini for script generation — to deliver ultra-realistic celebrity content at scale.

Target Users

- **Fans / Consumers** — Book personalized celebrity content for birthdays, anniversaries, festivals
- **Celebrities / Creators** — Monetize their brand through AI-powered content creation
- **Businesses** — Run celebrity-powered promotional campaigns and UGC ads
- **Administrators** — Manage the platform, approve bookings, oversee finances

Tech Stack

Layer	Technologies
Frontend	React 18, TypeScript 5, Vite 5, Tailwind CSS v3, shadcn/ui
Backend	Supabase (PostgreSQL, Auth, Edge Functions, Realtime, Storage)
AI Services	HeyGen (avatars), Sync.so (lip-sync), ElevenLabs (voice), Gemini (scripts)
Payments	Razorpay (UPI, Cards, NetBanking) + Internal Wallet System
Communications	Resend (Email), MSG91 (SMS), Meta Cloud API (WhatsApp)
Voice Calls	Vapi (AI-powered celebrity voice calls)
Storage	Backblaze B2 (videos, audio, media assets)
State Mgmt	React Context + TanStack React Query v5
Deployment	Lovable Cloud with custom domain (wishme.today)

Key Metrics

65+	82+	53+	8+
Pages	Edge Functions	DB Tables	API Integrations

■SECTION 02

Page & Route Structure

Public Pages

Route	Component	Description	Access
/	Index	Landing page with hero, featured celebrities, how-it-works, video ads	Public
/celebrities	Celebrities	Browse all active/verified celebrities with search & category filters	Public
/celebrity/:id	CelebrityProfile	Detailed celebrity profile — bio, media gallery, reviews, pricing, follow/subscribe	Public
/business	Business	Business services overview — UGC ads, branded celebrity campaigns	Public
/ai-music	AIMusic	AI music creation landing page — browse AI-generated music features	Public
/how-it-works	HowItWorks	Step-by-step guide explaining the platform's booking flow	Public
/pricing	Pricing	Subscription plans comparison (Basic, Premium, Elite) with features	Public
/auth	Auth	Sign up / Sign in page with email + password authentication	Public
/reset-password	ResetPassword	Password reset flow using Supabase magic link	Public
/celebrity-signup	CelebritySignup	Celebrity application form — stage name, bio, social media, portfolio	Public
/privacy-policy	PrivacyPolicy	GDPR-compliant privacy policy	Public
/terms	TermsOfService	Terms of service / user agreement	Public
/celebrity-agreement	CelebrityAgreement	Celebrity-specific terms and commission agreement	Public
/refund-policy	RefundPolicy	Refund and cancellation policy	Public
/support	Support	Contact form and FAQ support page	Public
/referral-program	ReferralProgram	Referral program landing — how referrals work, rewards	Public
/payment/:id	PaymentReceipt	Universal payment receipt viewer (via WishMe Payment ID)	Public

User Dashboard Pages (Authenticated)

Route	Component	Description	Access
/dashboard	Dashboard	User home — bookings overview, quick actions, recent activity	User
/profile	Profile	Edit profile — name, avatar, phone, addresses, bank details	User
/settings	Settings	Account settings — notifications, theme, password change	User
/booking/:celebrityId	Booking	6-step booking wizard — details, delivery, guidelines, script, review, checkout	User
/bookings	Bookings	View all user's bookings with status tracking	User
/booking-summary	BookingSummary	Post-payment booking confirmation summary	User
/wallet	Wallet	Wallet balance, add funds, transaction history	User
/commission	Commission	Referral commission earnings and payout history	User
/plan	Plan	Choose/upgrade subscription plan (Basic → Premium → Elite)	User
/following	Following	List of celebrities the user subscribes to	User
/messages	Messages	Real-time chat with celebrities (with AI auto-reply)	User
/referrals	Referrals	Referral dashboard — share link, track referrals, view earnings	User
/occasions	Occasions	Browse upcoming occasions (Diwali, Christmas, etc.)	User
/occasions/:id/book	OccasionBooking	Book occasion-specific celebrity greeting (video or card)	User
/occasion-wishes	OccasionWishes	View user's occasion wish orders	User
/occasion-alerts	OccasionAlerts	Set reminders for upcoming occasions	User
/loved-ones	LovedOnes	Manage loved ones — save recipients for quick booking	User
/wish-celebrity	WishACelebrity	Browse celebrities to send a personal wish	User
/wish-booking/:id	WishBooking	Wish booking form — message, AI enhancement, payment	User
/wish-confirmation/:id	WishConfirmation	Wish order confirmation page	User
/wish-orders	WishOrders	View all wish orders with status	User
/wish-congratulations	WishCongratulations	Success page after wish submission	User
/greeting-cards	GreetingCards	AI greeting card generator — custom prompts & styles	User
/image-promotions	ImagePromotions	Generate AI celebrity promotional images	User
/ugc-videos	UGCVideos	Create user-generated content videos with celebrity likeness	User

Route	Component	Description	Access
/ugc-ads	UGCAds	Generate AI-powered UGC ad creatives	User
/ai-music-creation	AIMusicCreation	Create AI music — lyrics, genre, voice style	User
/music-studio	MusicStudio	Full music production studio with ElevenLabs integration	User
/my-music	MyMusic	Library of user's generated AI music tracks	User
/voice-call-wish	VoiceCallWish	Book an AI voice call with a celebrity via Vapi	User
/photo-wish	PhotoWish	Generate AI photo-based celebrity wishes	User
/order/:id/view	OrderVideoView	View/play completed video order with sharing options	User

Celebrity Dashboard Pages

Route	Component	Description	Access
/celebrity-dashboard	CelebrityDashboard	10-tab creator hub: Content, Wallet, Messages, Events, Consent, Bookings, Reviews, Followers, TDS, Profile	Celebrity
/celebrity-notifications	CelebrityNotifications	Booking alerts, new followers, payout notifications	Celebrity
/celebrity-settings	CelebritySettings	Auto-reply, booking preferences, notification settings	Celebrity
/celebrity-wishes	CelebrityWishes	View and respond to fan wish requests	Celebrity
/celebrity-voice-call	CelebrityVoiceCall	Manage voice call availability and pricing	Celebrity

Admin Panel Pages

Route	Component	Description
/admin	AdminOverview	Dashboard with KPIs — revenue, users, bookings, active celebrities
/admin/users	AdminUsers	User management — search, view profiles, change roles, deactivate
/admin/celebrities	AdminCelebrities	Celebrity management — verify, edit, manage video pipelines
/admin/celebrities/:id/edit	AdminCelebrityEdit	Full celebrity editor — pricing, base videos, voice config, consent
/admin/celebrity-categories	AdminCelebrityCategories	Manage celebrity categories (Actor, Singer, Cricketer, etc.)
/admin/bookings	AdminBookings	All bookings — approve, process, track video generation pipeline
/admin/plans	AdminPlans	Subscription plan management — pricing, features, discounts
/admin/occasions	AdminOccasions	Manage occasions — create, edit dates, assign images
/admin/analytics	AdminAnalytics	Revenue charts, booking trends, user growth analytics
/admin/tds-reports	AdminTDSReports	TDS (Tax Deducted at Source) reports for celebrity payouts
/admin/settings	AdminSettings	Platform settings — commission rates, API keys, feature toggles
/admin/wallet	AdminWalletManagement	Wallet oversight — view balances, process payouts
/admin/subscriptions	AdminSubscriptions	Manage user subscriptions and plan changes
/admin/wish-orders	AdminWishOrders	Process and track all wish orders across the platform
/admin/media-library	AdminMediaLibrary	Upload/manage media assets stored in Backblaze B2
/admin/banner-media-library	AdminBannerMediaLibrary	Manage homepage banners and promotional media

Route	Component	Description
/admin/communication-hub	AdminCommunicationHub	Send newsletters, bulk emails, SMS, WhatsApp broadcasts
/admin/api-health	AdminApiHealth	Monitor external API connectivity (HeyGen, ElevenLabs, Razorpay, etc.)
/admin/audit-log	AdminAuditLog	System audit trail — login attempts, admin actions, API calls
/admin/database-backup	AdminDatabaseBackup	Database backup management and restoration tools

■SECTION 03

Features & User Flows

1. Celebrity Video Booking (Core Flow)

The primary revenue-generating feature. Users book personalized AI-generated videos from celebrities.

1. **Browse & Select** — User visits /celebrities, filters by category, clicks a celebrity profile
2. **Subscribe** — User must subscribe to the celebrity (paid subscription via /plan) before booking
3. **Start Booking** — Navigates to /booking/:celebrityId → 6-step wizard begins
4. **Step 1 - Request Details** — Enter recipient name, relationship, language, occasion type
5. **Step 2 - Delivery Type** — Choose Video, Digital Card, or Both. Price updates dynamically
6. **Step 3 - Creative Guidelines** — Select goal (Birthday Wish, Brand Launch, etc.) and tone
7. **Step 4 - Script Builder** — Write custom script OR click 'AI Generate' to auto-create via Gemini
8. **Step 5 - Review** — See price breakdown: Base Price - Plan Discount + 10% Platform Fee
9. **Step 6 - Checkout** — Pay via Wallet balance OR Razorpay (UPI/Cards/NetBanking)
10. **Processing** — Admin approves → process-video-order routes to HeyGen or Sync.so pipeline
11. **Delivery** — Video generated → stored in B2 → user notified → viewable at /order/:id/view

Backend Pipeline (Sync.so)

- 1. **generate-script** → Gemini creates celebrity-style script from user's message
- 2. **elevenlabs-text-to-speech** → Professional voice clone generates audio
- 3. **syncso-lipsync** → Lip-syncs audio to celebrity's mood-matched base video
- 4. **cron-poll-syncso-jobs** → Auto-polls every 2 min until complete
- 5. Final video saved to B2 at videos/syncso/{bookingId}/final.mp4

2. Fan-to-Celebrity Wishes

Fans send personalized wishes (birthday, anniversary, festival) to celebrities. AI generates video/card responses featuring the celebrity's likeness.

1. User browses /wish-celebrity → selects a subscribed celebrity
2. Fills wish form: occasion, message (manual or AI-suggested), recipient details
3. AI enhances the prompt using generate-wish-script edge function
4. Payment via Wallet or Razorpay
5. AI generates video (generate-occasion-video) or card (generate-greeting-card)
6. Wish delivered → user views at /wish-confirmation/:orderId

3. AI Music Creation

Users create AI-generated music tracks using ElevenLabs integration.

- Navigate to /ai-music-creation or /music-studio
- Choose genre, mood, lyrics (manual or AI-generated via generate-lyrics)
- Select voice style from ElevenLabs voice library
- Generate music via elevenlabs-generate-music edge function
- Track saved to B2 storage, accessible in /my-music library

4. AI Voice Calls

Real-time AI-powered voice calls with celebrity personas using Vapi.

- User navigates to /voice-call-wish → selects celebrity
- System creates call via vapi-make-call edge function
- Vapi uses celebrity's cloned voice for real-time conversation
- Call recorded and stored; webhook (vapi-webhook) handles events

5. Real-Time Messaging

Direct messaging between fans and celebrities with AI auto-reply capability.

- Users access /messages → conversation list with unread counts
- Real-time message delivery via Supabase Realtime subscriptions
- Celebrities can enable AI auto-reply (celebrity-conversation-auto-reply)
- Typing indicators via useTypingPresence hook
- Emoji picker, audio recording, image sharing supported

6. Wallet & Payments

- Internal wallet system with ledger-based transactions (DB triggers update balance)
- Add funds via Razorpay (create-razorpay-order → verify-razorpay-payment)
- WishMe Payment ID format: WM + YYMM + 5 alphanumeric chars
- Universal receipt at /payment/:wishmePaymentId
- TDS auto-calculated on celebrity payouts (10% with PAN, 20% without)
- 2-level referral commission system with automatic distribution

7. Subscription Plans

- **Basic (Free)** — Limited access, no discounts
- **Premium** — Discounts on bookings, priority delivery, AI music credits
- **Elite** — Maximum discounts, exclusive celebrities, unlimited AI features
- Plan selection via PlanSelectionModal or /plan page

- Discount applied automatically via usePlanDiscount hook

8. Referral System

- Each user gets a unique referral_code and shareable referral_url
- 2-level commission: Direct referrer + their referrer both earn
- Tracked via referred_by field in profiles table
- Commission credited to wallet on referred user's first purchase
- Notifications sent via send-referral-earning-email

9. AI Assistant & Voice

- Floating AI chat assistant (AIAssistant component) powered by Gemini
- RAG system (ragSystem.ts) with knowledge base JSONs for contextual answers
- Voice input via Google Speech-to-Text (useGoogleSpeech hook)
- Conversation history persisted in ai_conversations / ai_messages tables
- Quick actions, suggestion chips, and form auto-fill capabilities

■SECTION 04

Database Schema

The platform uses **53+ PostgreSQL tables** in Supabase with Row Level Security (RLS) enabled on all user-facing tables. Below are the core tables grouped by domain.

Core User & Auth Tables

Table	Key Columns	Purpose
profiles	id, user_id, email, first_name, last_name, phone, role, plan, avatar_url, is_active, referral_code, referred_by, referral_url	User profiles linked to auth.users — stores role (user/celebrity/admin), subscription plan, referral data
addresses	id, user_id, address_line_1/2, city, state, pincode, country_id, state_id, area, address_type, is_default	User shipping/billing addresses with location hierarchy support
bank_details	id, user_id, bank_name, account_number, ifsc_code, account_holder_name, account_type, is_default	Celebrity & user bank details for payouts

Celebrity Tables

Table	Key Columns	Purpose
celebrities	id, name, category, bio, image_url, service_prices, video_generation_provider, heygen_avatar_id, elevenlabs_professional_voice_id, base_video_*_key, consent_status, followers, rating	Master celebrity table — pricing, AI config, base videos, consent tracking
celebrity_categories	id, name, description, is_active	Category taxonomy (Actor, Singer, Cricketer, Comedian, etc.)
celebrity_favorites	id, user_id, celebrity_id, price_paid, status, subscription_expires_at, auto_renew	Fan-celebrity subscription records with auto-renewal
celebrity_media	id, celebrity_id, media_type, file_url, title, is_public, is_avatar_content, consent_recorded	Celebrity media gallery — photos, videos, promotional content
celebrity_occasions	id, celebrity_id, occasion_name, occasion_date, occasion_type, auto_reply_enabled	Celebrity-specific occasions with AI auto-reply templates
celebrity_reviews	id, celebrity_id, user_id, booking_id, rating, review_text	User reviews/ratings for celebrities
celebrity_settings	id, celebrity_id, auto_accept_bookings, ai_auto_reply_enabled, email_notifications	Celebrity preference configuration
celebrity_notifications	id, celebrity_id, title, message, type, is_read	Push notifications for celebrities
celebrity_events	id, celebrity_id, title, event_date, event_type, location, is_public	Celebrity events calendar

Table	Key Columns	Purpose
celebrity_applications	id, first_name, last_name, stage_name, email, phone, bio, category, status	Celebrity onboarding applications
celebrity_wallet_transactions	id, celebrity_id, amount, transaction_type, booking_id, tds_amount, commission_percentage	Celebrity earnings ledger with TDS deductions
celebrity_favorite_pricing	id, celebrity_id, price, is_enabled, celebrity_commission_percentage	Custom subscription pricing per celebrity

Booking & Order Tables

Table	Key Columns	Purpose
bookings	id, user_id, celebrity_id, service_type, status, final_price, original_price, message, script_content, video_url, video_file_key, heygen_video_id, syncso_job_id, lipsync_provider, generation_status, delivery_type, selected_base_video_mood	Master booking table — tracks entire lifecycle from pending to completed
occasion_bookings	id, user_id, occasion_id, celebrity_id, booking_type, recipient_name, message, price, status	Occasion-specific bookings (Diwali, Birthday, etc.)
wish_orders	id, user_id, celebrity_id, occasion, message, status, video_url, card_url	Fan wish orders — AI-generated celebrity responses
delivery_type_pricing	id, delivery_type, base_price	Configurable pricing for video, card, and combo delivery

Payment & Financial Tables

Table	Key Columns	Purpose
payment_transactions	id, user_id, wishme_payment_id, amount, payment_method, service_type, status, razorpay_order_id	Central payment ledger — all platform payments tracked here
wallet_transactions	id, user_id, amount, type, description, reference_id	User wallet credit/debit ledger
payout_requests	id, celebrity_id, amount, status, bank_details_id, processed_at	Celebrity payout withdrawal requests
referral_commissions	id, referrer_id, referred_id, booking_id, amount, level, status	2-level referral commission tracking

Communication Tables

Table	Key Columns	Purpose
conversations	id, user_id, celebrity_id, last_message_at, unread_count_user, unread_count_celebrity, is_closed	Chat thread metadata between fan and celebrity
messages	id, conversation_id, sender_id, content, message_type, is_read, media_url	Individual chat messages with media support
ai_conversations	id, user_id, title	AI assistant conversation threads
ai_messages	id, conversation_id, role, content, suggestions, actions, is_voice_input	AI assistant message history
newsletter_subscriptions	id, email, is_active	Email newsletter opt-in tracking
notification_templates	id, event_key, channel, subject, body_template	Configurable notification templates (email, SMS, WhatsApp)

Platform Configuration Tables

Table	Key Columns	Purpose
occasions	id, name, description, date, image_url, is_active	Platform occasions (festivals, holidays)
plans	id, name, price, features, discount_percentage	Subscription plan definitions
countries / states / areas	id, name, code, is_active	Location hierarchy for address management
admin_media_assets	id, asset_type, file_url, celebrity_id, display_order, is_active	Homepage banners, promotional media
audit_log	id, user_id, action_category, action_type, action_label, severity, metadata	System-wide audit trail
api_key_audit_log	id, admin_user_id, key_name, action, success	API key management audit
abandoned_cart_tracking	id, user_id, celebrity_id, service_type, cart_data, reminder_sent	Cart abandonment recovery

■SECTION 05

Authentication & Authorization

Authentication Method

WishMe uses **Supabase Auth** with email + password authentication. The AuthProvider context wraps the entire application and manages user state, session tokens, and profile synchronization.

Feature	Implementation
Sign Up	Email + password with Zod validation. Creates auth.users record + profiles row. Sends confirmation email. Referral code linkage at signup.
Sign In	Email + password via signInWithPassword(). Phone login disabled for security. Auto-resends confirmation if email not verified.
Sign Out	Clears Supabase session + all sb-* localStorage keys. Redirects to /
Password Reset	Supabase magic link flow via /reset-password page
Session	JWT-based with auto-refresh. 5-second safety timeout prevents infinite loading
Profile Sync	ensureProfile() auto-creates/updates profiles row on every auth state change

User Roles

Role	Permissions
user	Default role. Can browse, book, message, manage wallet, use AI features
celebrity	Extended user with celebrity dashboard access, earnings, content management
admin	Full platform access — manage users, celebrities, bookings, finances, settings

Route Protection

- **ProtectedRoute** component — wraps routes requiring authentication, redirects to /auth
- **AuthenticatedLayout** — provides sidebar navigation for logged-in users
- **AdminLayout** — checks profile.role === 'admin' before rendering admin routes
- **Celebrity Dashboard** — checks celebrities table for matching profile_id
- **Booking Wizard** — requires active celebrity subscription (celebrity_favorites check)

■SECTION 06

APIs & Integrations

Service	Category	Usage	Edge Functions	API Key Storage
HeyGen	AI Video Generation	Avatar-based video creation. Used for celebrity video messages when video_generation_provider = 'heygen'	generate-heygen-video, poll-heygen-status, heygen-webhook, heygen-get-avatars/voices/languages	HEYGEN_API_KEY (Supabase Secret)
Sync.so	Lip-Sync Video	Ultra-realistic lip-syncing of audio to base celebrity videos. Primary pipeline for premium content	syncso-lipsync, poll-syncso-status, cron-poll-syncso-jobs	SYNCSO_API_KEY (Supabase Secret)
ElevenLabs	Voice AI	Professional voice cloning, text-to-speech, music generation, audio isolation, sound effects	elevenlabs-text-to-speech, elevenlabs-generate-music, elevenlabs-clone-voice, + 8 more	ELEVENLABS_API_KEY (Supabase Secret)
Google Gemini	AI Text Generation	Script writing, message suggestions, greeting card prompts, auto-replies, lyrics generation	generate-script, generate-message-suggestions, generate-lyrics, ai-assistant, celebrity-ai-message	GEMINI_API_KEY (Supabase Secret)
Razorpay	Payment Gateway	UPI, credit/debit cards, net banking payments. Indian payment processing	create-razorpay-order, verify-razorpay-payment	RAZORPAY_KEY_ID, RAZORPAY_KEY_SECRET (Supabase Secrets)
Vapi	AI Voice Calls	Real-time AI voice calls using cloned celebrity voices. WebRTC-based	vapi-make-call, vapi-webhook, vapi-get-voices, vapi-upload-voice, vapi-celebrity-call	VAPI_API_KEY (Supabase Secret)
Resend	Email Service	Transactional emails — booking confirmations, welcome emails, newsletters, referral notifications	send-email-otp, send-newsletter-welcome, send-bulk-newsletter, send-order-notification	RESEND_API_KEY (Supabase Secret)
MSG91	SMS Gateway	OTP verification and transactional SMS to Indian mobile numbers	send-email-otp (also handles SMS), verify-email-otp	MSG91_AUTH_KEY (Supabase Secret)
Meta Cloud API	WhatsApp	WhatsApp message delivery for booking notifications and wish alerts	send-wishme-notification, send-unified-message	WHATSAPP_TOKEN, WHATSAPP_PHONE_ID (Supabase Secrets)
Backblaze B2	Object Storage	Video storage, audio files, media assets, base celebrity videos. S3-compatible API	b2-upload-media, b2-upload-base-video, b2-get-signed-url, b2-delete-media	B2_KEY_ID, B2_APPLICATION_KEY, B2_BUCKET_ID (Supabase Secrets)

■SECTION 07

Supabase Edge Functions

The platform has **82+ Supabase Edge Functions** (Deno-based serverless functions). Below is a categorized catalog.

Video Generation Pipeline

Function	Trigger	Description
process-video-order	HTTP	Routes booking to HeyGen or Sync.so based on celebrity config
generate-heygen-video	HTTP	Creates HeyGen avatar video with script
poll-heygen-status	HTTP	Checks HeyGen video generation progress
poll-heygen-status-batch	HTTP	Batch polls multiple HeyGen jobs
heygen-webhook	Webhook	Receives HeyGen completion callbacks
syncso-lipsync	HTTP	Submits lip-sync job to Sync.so API
poll-syncso-status	HTTP	Checks Sync.so job completion
cron-poll-syncso-jobs	Scheduled	Auto-polls all pending Sync.so jobs every 2 minutes
check-heygen-video-status	HTTP	Verifies HeyGen video availability
generate-occasion-video	HTTP	Generates occasion-specific AI video
generate-celebrity-video-messages	HTTP	Batch generates celebrity video messages
generate-ai-celebrity-video	HTTP	Creates AI celebrity video from prompt
fix-booking-video	HTTP	Repairs failed video generation attempts
process-ugc-video-id	HTTP	Processes UGC video identifiers
upload-ugc-video	HTTP	Handles UGC video upload to B2
generate-ugc-video	HTTP	Creates user-generated content videos
generate-ugc-ad	HTTP	Generates AI UGC advertisement videos

Voice & Audio

Function	Trigger	Description
elevenlabs-text-to-speech	HTTP	Generates speech audio from text using professional voice clone
elevenlabs-generate-music	HTTP	Creates AI music tracks
elevenlabs-generate-audio	HTTP	General audio generation
elevenlabs-clone-voice	HTTP	Clones a celebrity's voice from audio samples

Function	Trigger	Description
elevenlabs-get-voices	HTTP	Lists available ElevenLabs voices
elevenlabs-get-user-voices	HTTP	Gets user's custom cloned voices
elevenlabs-get-languages	HTTP	Lists supported languages for TTS
elevenlabs-speech-to-speech	HTTP	Voice-to-voice conversion
elevenlabs-sound-effects	HTTP	Generates AI sound effects
elevenlabs-audio-isolation	HTTP	Isolates vocals from music tracks
elevenlabs-image-music-video	HTTP	Creates music video from image + audio
verify-elevenlabs-voice	HTTP	Validates voice clone quality
generate-lyrics	HTTP	AI-generates song lyrics via Gemini
generate-music	HTTP	Orchestrates full music generation pipeline
check-music-status	HTTP	Polls music generation progress
save-music-to-b2	HTTP	Stores generated music in B2 storage
get-user-voices	HTTP	Retrieves user's voice library

Payment & Notifications

Function	Trigger	Description
create-razorpay-order	HTTP	Creates Razorpay payment order with amount
verify-razorpay-payment	HTTP	Validates payment signature and updates booking
send-order-notification	HTTP	Sends booking confirmation via email/SMS/WhatsApp
send-wishme-notification	HTTP	Unified notification engine — routes by event_key
send-unified-message	HTTP	Multi-channel message delivery (email + SMS + WhatsApp)
send-email-otp	HTTP	Sends OTP for email verification
verify-email-otp	HTTP	Validates submitted OTP code
send-newsletter-welcome	HTTP	Welcome email for newsletter subscribers
send-bulk-newsletter	HTTP	Sends bulk marketing emails
send-celebrity-subscription-email	HTTP	Notifies celebrity of new subscriber
send-referral-earning-email	HTTP	Notifies referrer of commission earned
send-wish-thankyou-dm	HTTP	Auto-sends thank you DM after wish
send-wish-to-celebrity	HTTP	Delivers fan wish notification to celebrity
process-abandoned-carts	Scheduled	Sends reminders for incomplete checkouts
process-scheduled-calls	Scheduled	Initiates scheduled voice calls
process-scheduled-messages	Scheduled	Sends time-delayed messages
trigger-message-event	HTTP	Triggers realtime message event for UI updates

AI & Content Generation

Function	Trigger	Description
ai-assistant	HTTP	Main AI chat assistant endpoint — RAG + Gemini
generate-script	HTTP	Creates booking video scripts via Gemini
generate-wish-script	HTTP	Generates wish-specific scripts
generate-message-suggestions	HTTP	AI message suggestions for chat
generate-greeting-card	HTTP	Creates AI greeting card designs
generate-greeting-card-ai	HTTP	Enhanced AI greeting card with prompts
suggest-greeting-card-prompts	HTTP	AI suggests card design prompts
generate-image-promotion	HTTP	Creates celebrity promotional images
generate-photo-wish	HTTP	Generates AI photo wishes

Function	Trigger	Description
generate-wish-celebrity-card	HTTP	Creates wish card for celebrity occasion
generate-occasion-auto-reply	HTTP	Auto-generates occasion replies for celebrities
celebrity-ai-message	HTTP	AI-powered celebrity message composer
celebrity-conversation-auto-reply	HTTP	AI auto-reply for celebrity chats

Storage & Admin

Function	Trigger	Description
b2-upload-media	HTTP	Uploads media files to Backblaze B2
b2-upload-base-video	HTTP	Uploads celebrity base videos (large file support via B2 native API)
b2-get-signed-url	HTTP	Generates time-limited signed URLs for private B2 content
b2-delete-media	HTTP	Deletes files from B2 (supports mediaId or direct fileKey)
manage-api-keys	HTTP	Admin API key CRUD operations
test-api-connections	HTTP	Health-checks all external API connections
admin-reset-password	HTTP	Admin-initiated password reset for users
update-booking-status	HTTP	Updates booking status and triggers appropriate pipeline
update-booking-video	HTTP	Manually updates video URL for a booking
verify-video-access	HTTP	Validates user's permission to view a video
get-featured-celebrities	HTTP	Returns featured celebrities for homepage
insert-sample-celebrity	HTTP	Seeds database with sample celebrity data
populate-indian-celebrities	HTTP	Populates Indian celebrity database
check-messaging-status	HTTP	Verifies messaging system health
auto-poll-syncso	HTTP	Manual trigger for Sync.so polling

■SECTION 08

State Management & Data Flow

Global State (React Context)

Context	File	What It Manages
AuthContext	useAuth.tsx	User session, profile, auth methods (signIn, signUp, signOut, updateProfile)
ThemeContext	ThemeContext.tsx	Dark/light theme toggle with localStorage persistence
AIAssistantContext	AIAssistantContext.tsx	AI assistant state — open/closed, conversation, preferences

Server State (TanStack React Query v5)

React Query manages all API data fetching with 5-minute stale time and 10-minute garbage collection. Refetch on window focus and mount are disabled for performance.

Custom Hooks

Hook	Purpose
useAuth	Authentication state + methods
useIsMobile	Responsive breakpoint detection
useCelebrityFavorites	Celebrity subscription status
useCelebritySubscription	Active subscription check for booking access
useConversations	Chat conversation list with real-time updates
useMessages	Individual chat messages with Supabase Realtime
useTypingPresence	Typing indicator via Supabase Realtime presence
useWalletBalance	User wallet balance with real-time sync
usePlanDiscount	Calculate plan-based discount percentages
useTDSReports	Celebrity TDS report generation
useHeroVersion	A/B test hero section toggle
useDebounce	Input debouncing utility
useAIConversations	AI assistant conversation management
useAIPreferences	AI assistant user preferences
useAINavigation	AI-driven page navigation

Hook	Purpose
useAIFormAssist	AI-powered form auto-completion
useAIAnalytics	AI usage tracking and analytics
useGoogleSpeech	Google Speech-to-Text integration

■SECTION 09

File & Folder Structure

Path	Description
src/	Application source code root
src/pages/	65+ page components — one per route
src/pages/admin/	20 admin panel page components
src/components/	Reusable UI components organized by domain
src/components/ui/	shadcn/ui base components (button, card, dialog, etc.)
src/components/admin/	Admin-specific components (AdminLayout, BookingDetailsDialog, etc.)
src/components/booking/	6-step booking wizard step components
src/components/celebrity/	Celebrity dashboard tab components
src/components/home/	Homepage section components (hero, featured, how-it-works)
src/components/messages/	Chat UI components (ConversationList, ChatView, MessageBubble)
src/components/ai-assistant/	AI assistant floating chat components
src/components/voice-assistant/	Voice input and Vapi call components
src/components/auth/	OTP verification, password strength meter
src/components/layout/	AuthenticatedLayout, ProtectedRoute wrappers
src/components/payment/	Payment UI (Razorpay, method selector)
src/components/profile/	Address manager, bank details
src/components/media/	B2VideoPlayer, AudioRecorder, ImagePreview
src/components/gdpr/	Cookie consent banner
src/contexts/	React Context providers (Auth, Theme, AI)
src/hooks/	18+ custom React hooks
src/utils/	Utility functions (validation, audit, payment ID, RAG)
src/data/	Knowledge base JSONs + service guide definitions
src/integrations/supabase/	Supabase client config + auto-generated types
src/lib/	Shared utilities (cn, performance helpers)
supabase/functions/	82+ Edge Functions (Deno TypeScript)
supabase/migrations/	SQL migration files for schema changes
public/	Static assets (robots.txt, sitemap.xml, favicon)

■SECTION 10

Security Analysis

Row Level Security (RLS)

- RLS **enabled on all user-facing tables** (profiles, bookings, conversations, messages, etc.)
- Security-definer functions used for cross-table permission checks (e.g., admin role verification)
- Profiles table uses auth.uid() = user_id for self-access policies
- Celebrity data has public SELECT policies for browse pages + restricted UPDATE for owners
- Admin operations use has_role() security-definer function to prevent RLS recursion

Secret Management

- All API keys stored as **Supabase Edge Function Secrets** — never exposed to frontend
- Only VITE_SUPABASE_URL and VITE_SUPABASE_PUBLISHABLE_KEY exposed via .env (anon key only)
- Razorpay Key ID (publishable) used client-side; Key Secret only in edge functions
- B2 credentials, ElevenLabs, HeyGen, Sync.so keys all server-side only

Input Validation

- Zod schema validation on auth forms (signInSchema, signUpSchema in validation.ts)
- Phone numbers normalized to E.164 format via normalizePhone()
- Password strength meter with entropy calculation (passwordStrength.ts)
- All Edge Functions validate request body before processing

Additional Security Measures

- **CORS** — Edge Functions include proper CORS headers for cross-origin requests
- **Audit Logging** — All admin actions and auth events logged to audit_log table
- **Session Safety** — 5-second auth timeout prevents infinite loading states
- **Stale Token Handling** — TOKEN_REFRESHED without session triggers state cleanup
- **Cookie Consent** — GDPR-compliant cookie banner (CookieConsent component)
- **Chunk Retry** — lazyRetry() handles stale JS chunks after deployments
- **Error Boundaries** — ErrorBoundary component prevents crash propagation
